

## Job description

Bi4 Group is specialized in the development of business and big data web applications. We have years of experience in the development of complex solutions that fulfill the needs of our clients.

If you are a Software Developer with experience developing desktop applications in C# (.NET) we are looking for you!

We build dedicated team of highly qualified IT engineers that can develop an entire SaaS solution from scratch.

### **Your job**

- You will be part of an agile team
- You will analyze customer requirements, perform feasibility study, provide technical proposal, estimate workload and contribute to project requirements specification
- You will participate in the design, implementation, security and validation of applications within a project team structure
- You will collaborate in the documentation related to these activities.

### **Skills (Minimum position requirements):**

- Degree in Computer Engineering or similar
- Fluent in English (Minimum B2)
- C#
- .NET
- Microsoft SQL
- Visual Objects
- Visual Studio

The working procedure will be based on the application of agile methodologies (SCRUM / KANBAN) and the use of GitHub version control. Important to know how to handle this version control system.

### **We offer:**

- Contract: Indefinite contract
- Type of working day: Full time
- Compromised environment and very good environment among peers
- Professional Development Plan

- Opportunity to work with international clients
- Good practices and well defined methodology
- Table football
